

Sensory Inc. is the leader in speech technologies for consumer products and is a profitable and fast growing company.

Sensory is focused on improving the user interface in consumer electronics through speech recognition, speech synthesis and other speech technologies. Sensory sells both IC and embedded software solutions.

Sensory was founded in 1994 and has put speech recognition solutions into over 50 Million products from 100s of leading consumer electronic manufacturers including Hasbro, Sony, JVC, Kenwood, Mattel, Uniden and others. Sensory has sold more speech recognition and voice biometric ICs than all its competitors combined.

SENSORY'S MARKET LEADING VOICE RECOGNITION NOW ON CSR BC-5!

- Runs on BC-5 MM Kalimba DSP
- Great for headsets, music players, HFK's, and other Bluetooth applications
- Proven 5th generation engine that has shipped over 50M units
- Speaker Independent recognition - no training needed
- Speech Recognition Functions
 - Command & control
 - Configuration and call acceptance
 - Voice dialing by name & continuous digit dialing
- Integrated Speech Synthesis
 - Highest quality customizable voice prompts
 - Confirmation of incoming and outgoing digit streams
- Language support: US English, UK English, French, German, Spanish, Italian, Mandarin, Japanese, Korean, and more!

Sensory's market leading Voice Recognition with integrated Speech Synthesis has arrived on the CSR BC-5 platform and can now enable a more exciting roadmap of features than ever possible before. Adding features and capabilities used to require adding numerous buttons on increasingly small designs, requiring frustrating "button push" sequences, and adding confusing status LED's. Sensory voice recognition with integrated voice synthesis capability can enable a user friendly, no training needed, approach to a rich feature set of capabilities that can grow your market, and your market share.
